Time and Language

Time and Language lets users set their local time zone, the language they want to work in, and adjust the speech function's spoken language.

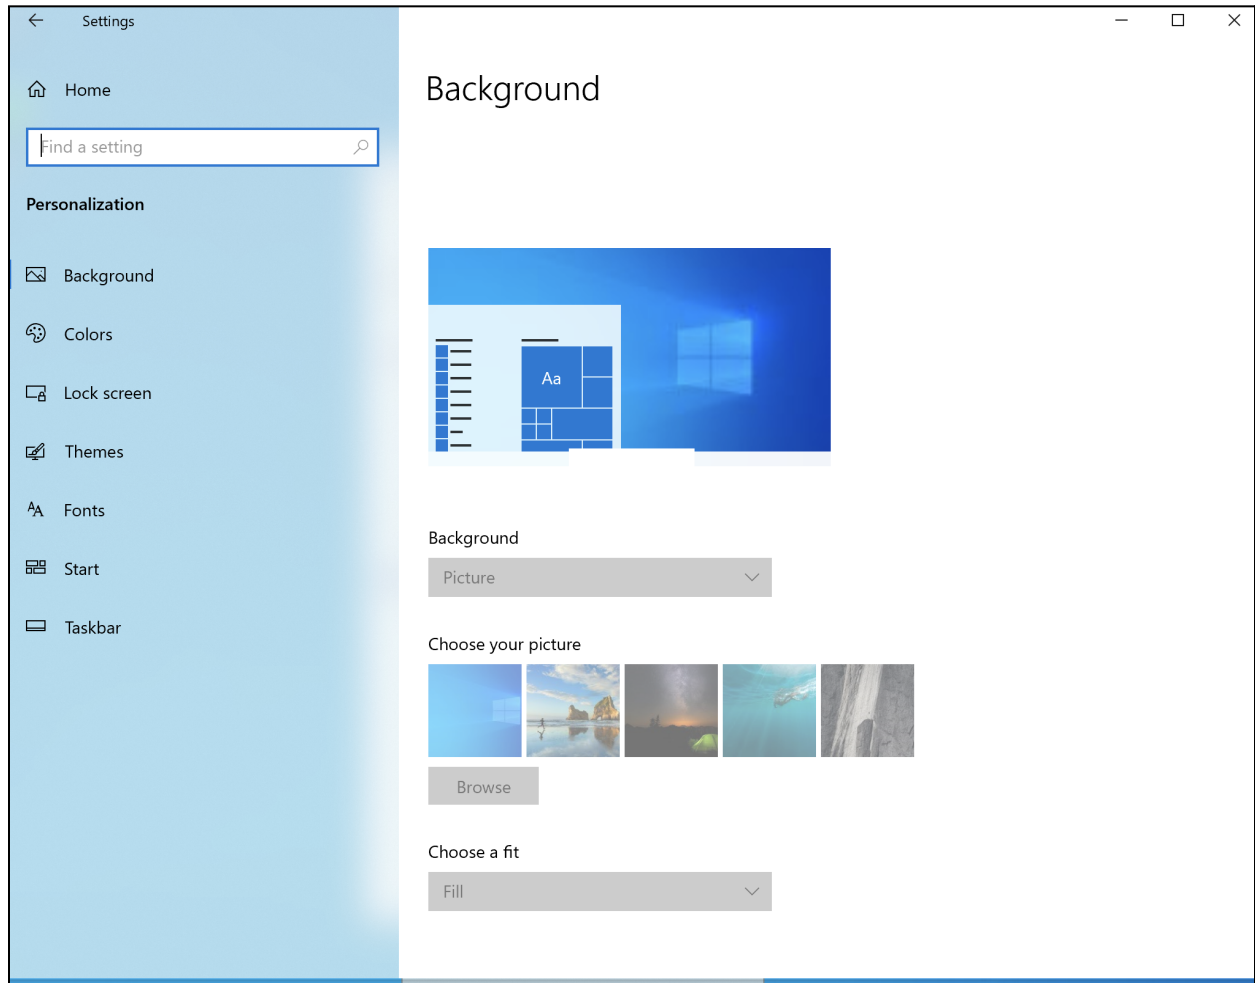

Updates and Security

Updates and Security lets the user see and change security settings, access information on the device's health, update the operating system, troubleshoot, and complete system recoveries. It defaults to built-in Windows Defender security and manages any third-party antivirus software.

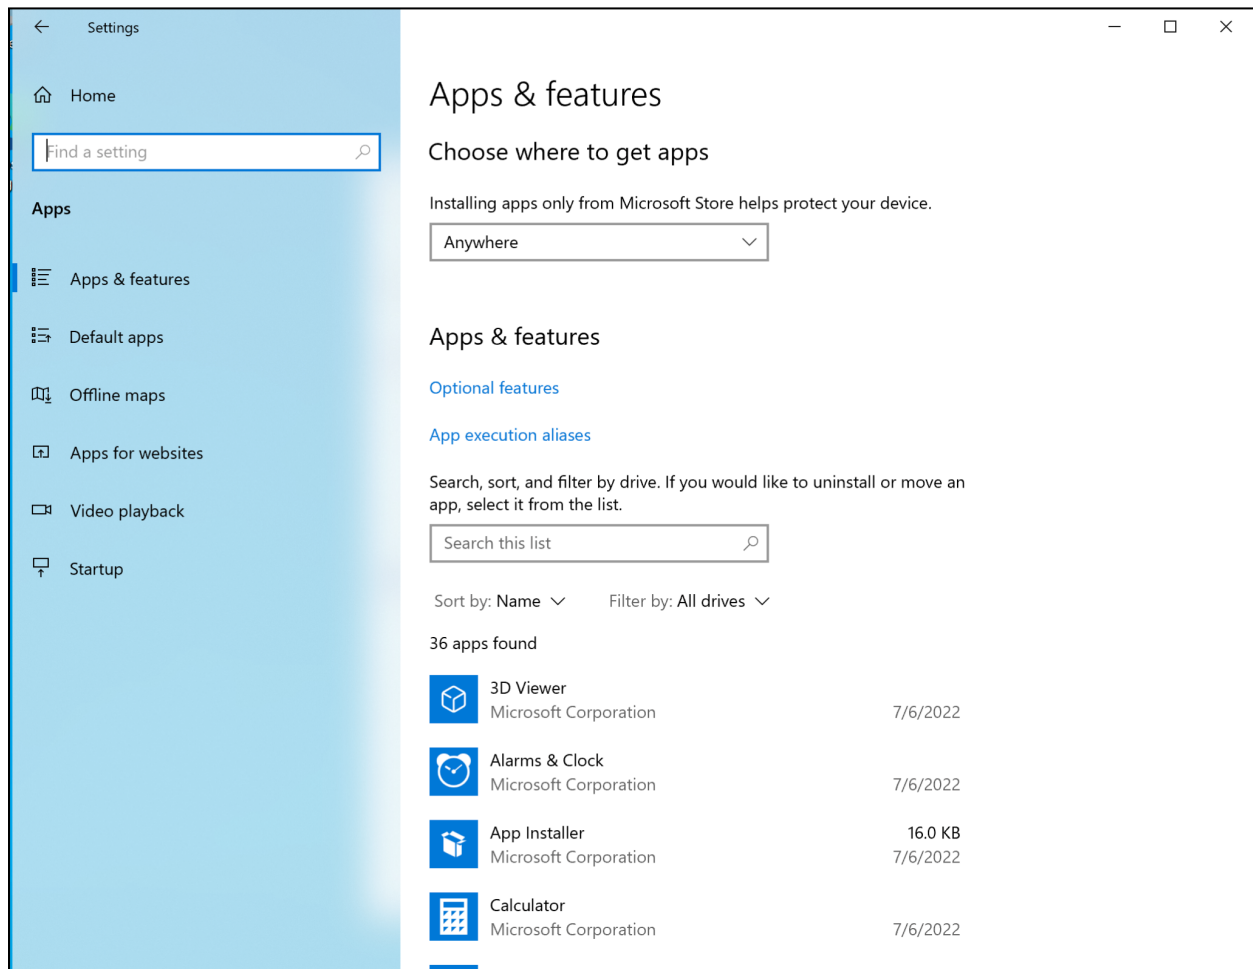

Personalization

Personalization lets the user change the background of the screen, colors, themes, fonts, lock screen, and items on the taskbar. It also lets the user set up what is shown in the Start menu.

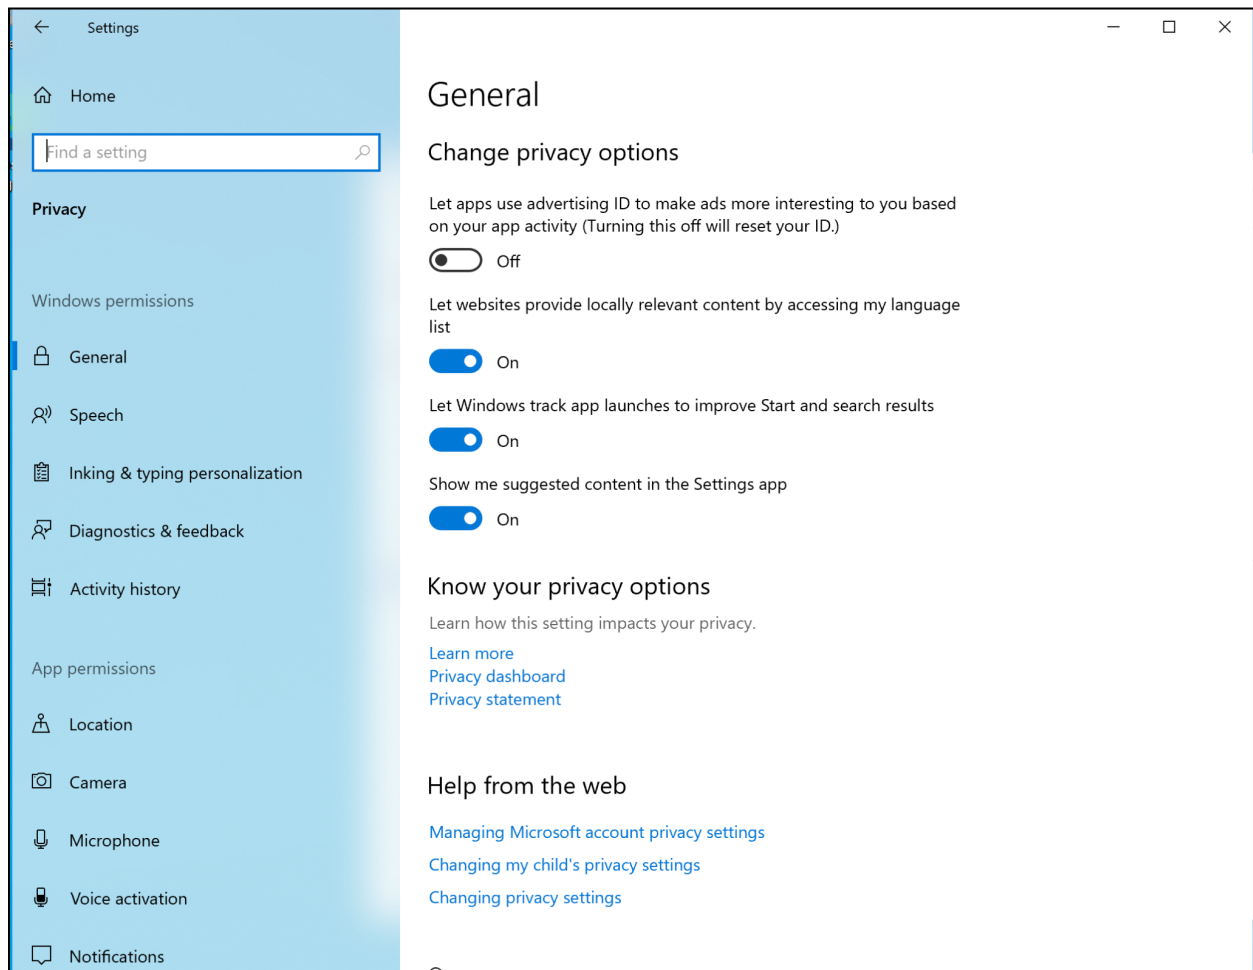

Apps

Apps lets the user install, uninstall and manage the apps on the device. On this panel, the user can adjust the default apps for various uses like email, maps, and internet browser. Users can also adjust in-app video playback and choose apps to open when the computer starts.

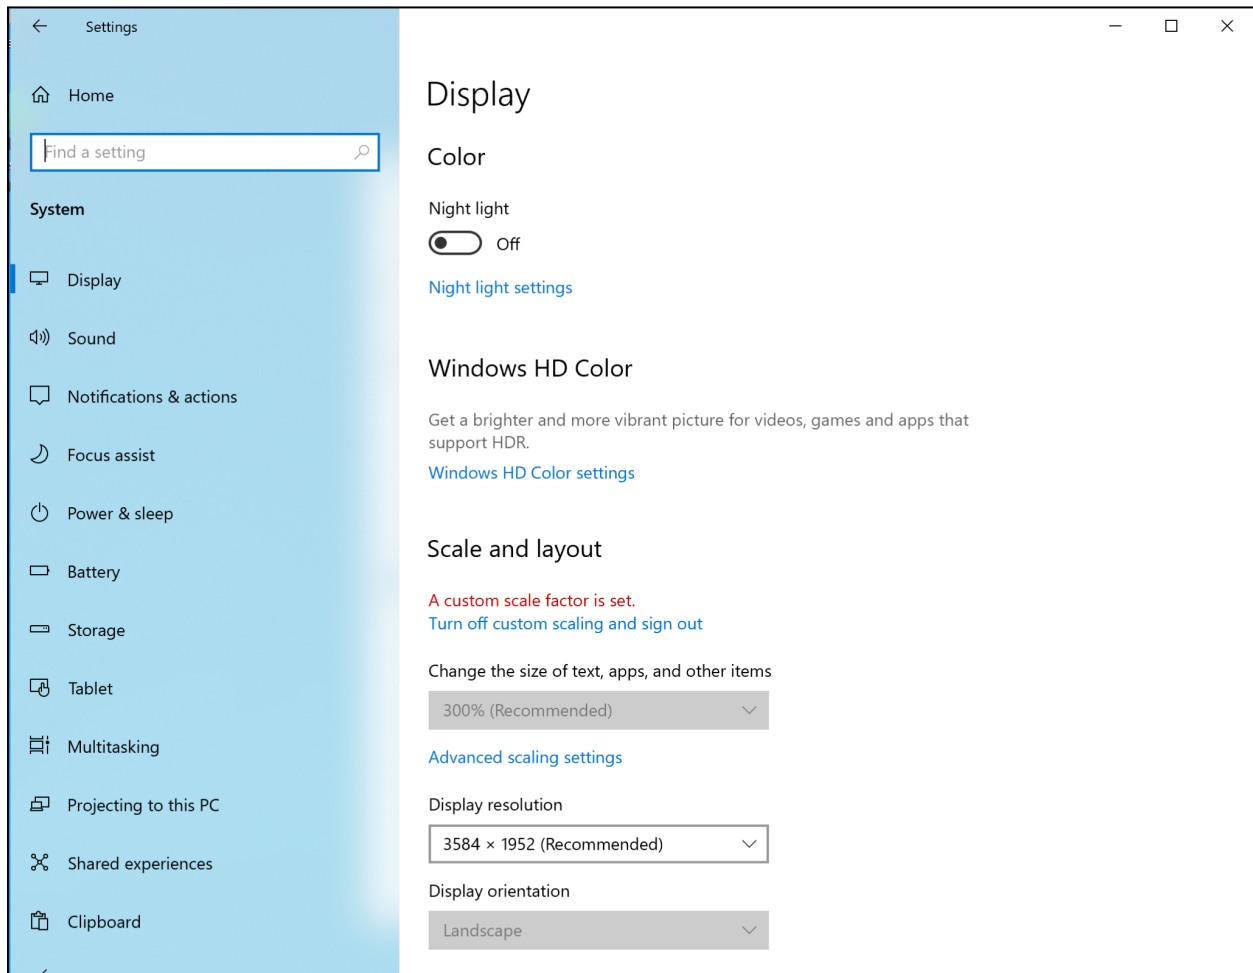

Privacy

Privacy lets the user set privacy permissions at both the Windows operating system level and application level. These permissions include use of location, camera, and microphone. From this panel the user can set notifications and access account information, contact information, the personalized calendar, call history, email, messaging, and tasks.

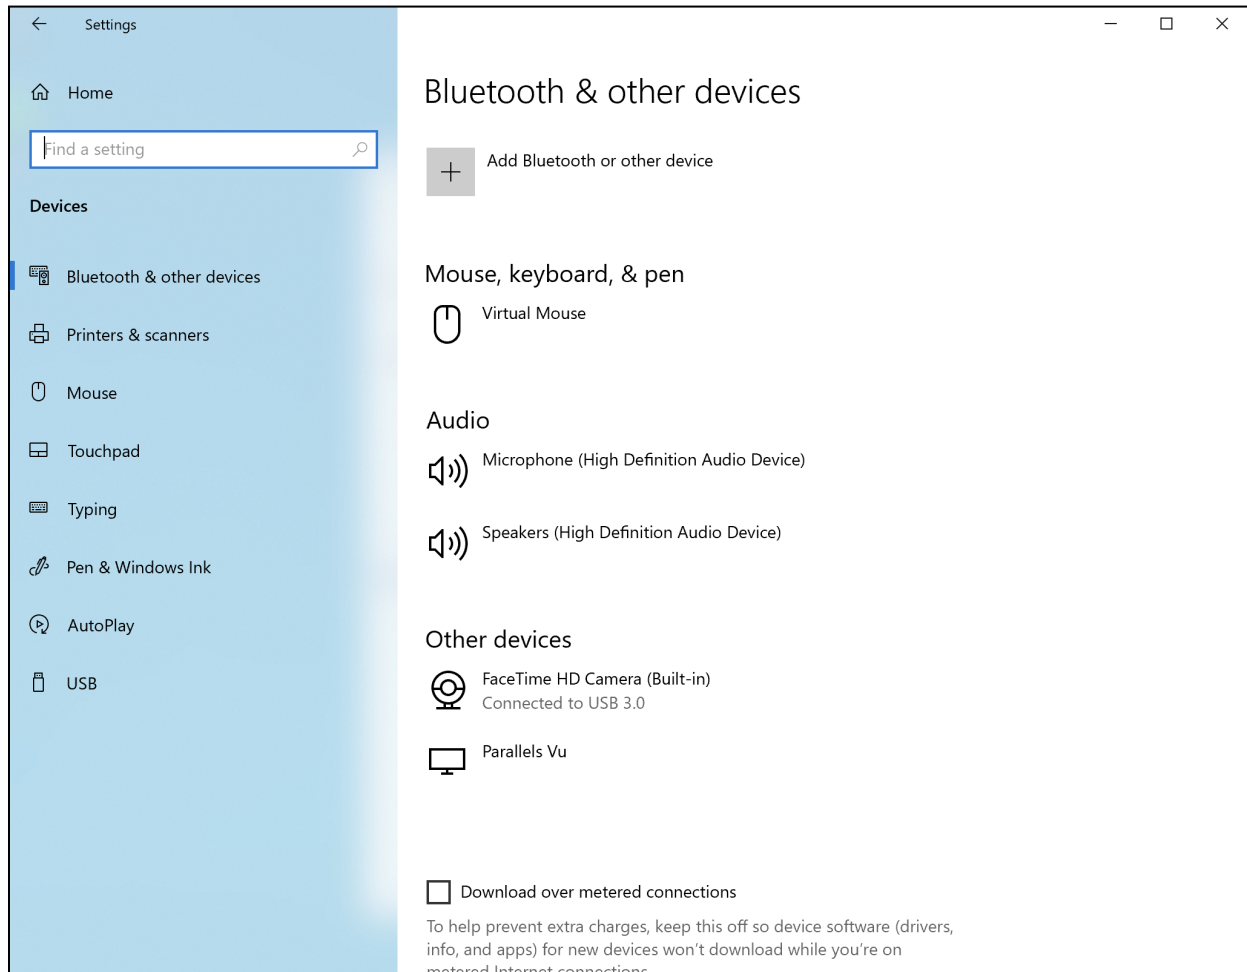

System

System lets the user change the resolution, orientation, size of text and thumbnails, and other graphic elements of the display. It also lets the user adjust the settings for sound, notifications and actions, power, sleep, battery features, and storage.

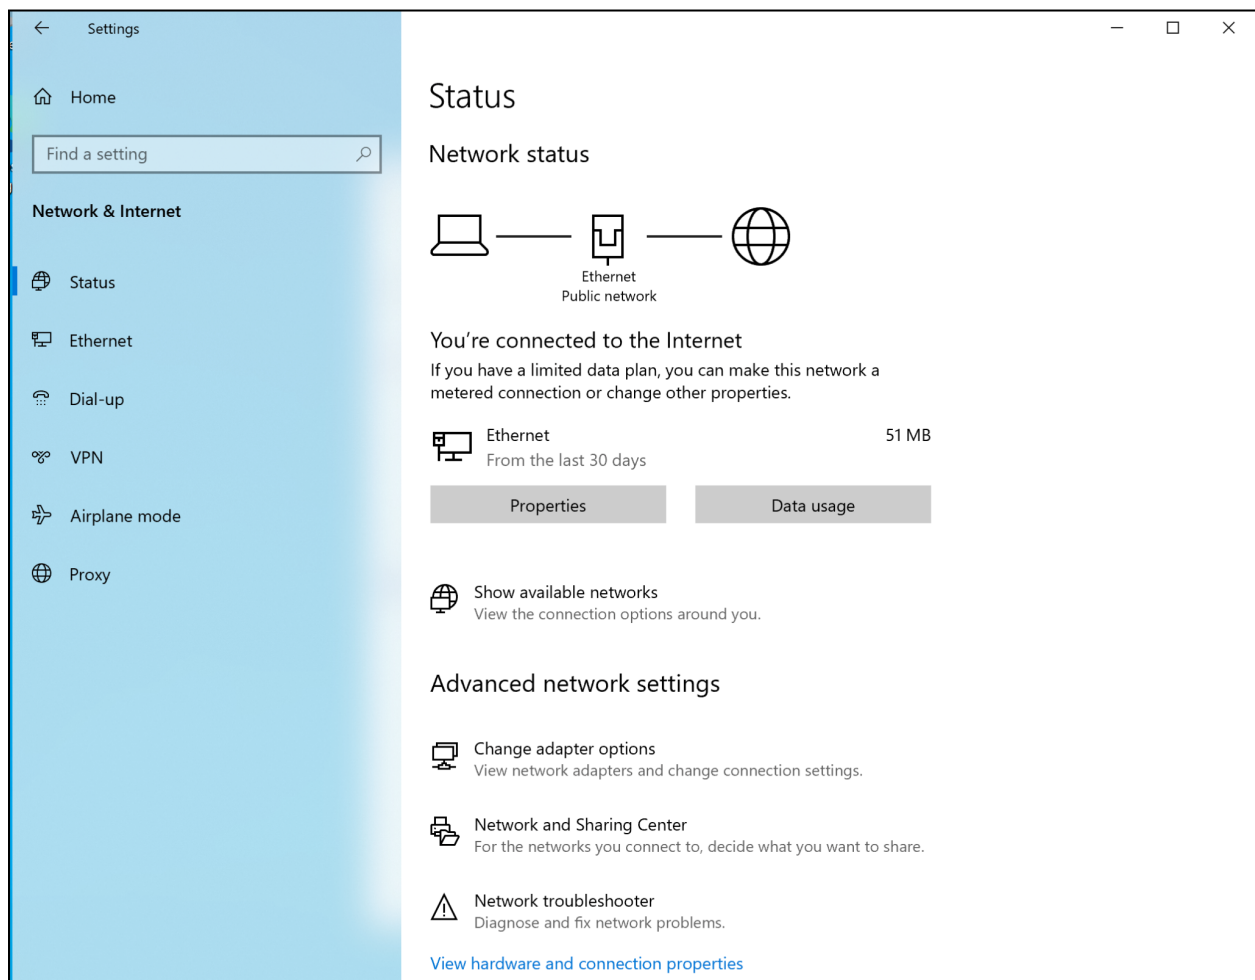

Devices

Devices lets the user add devices and manage device settings for the mouse, keyboard, pen, and plugin devices. On this panel, the user can also connect and manage Bluetooth devices.

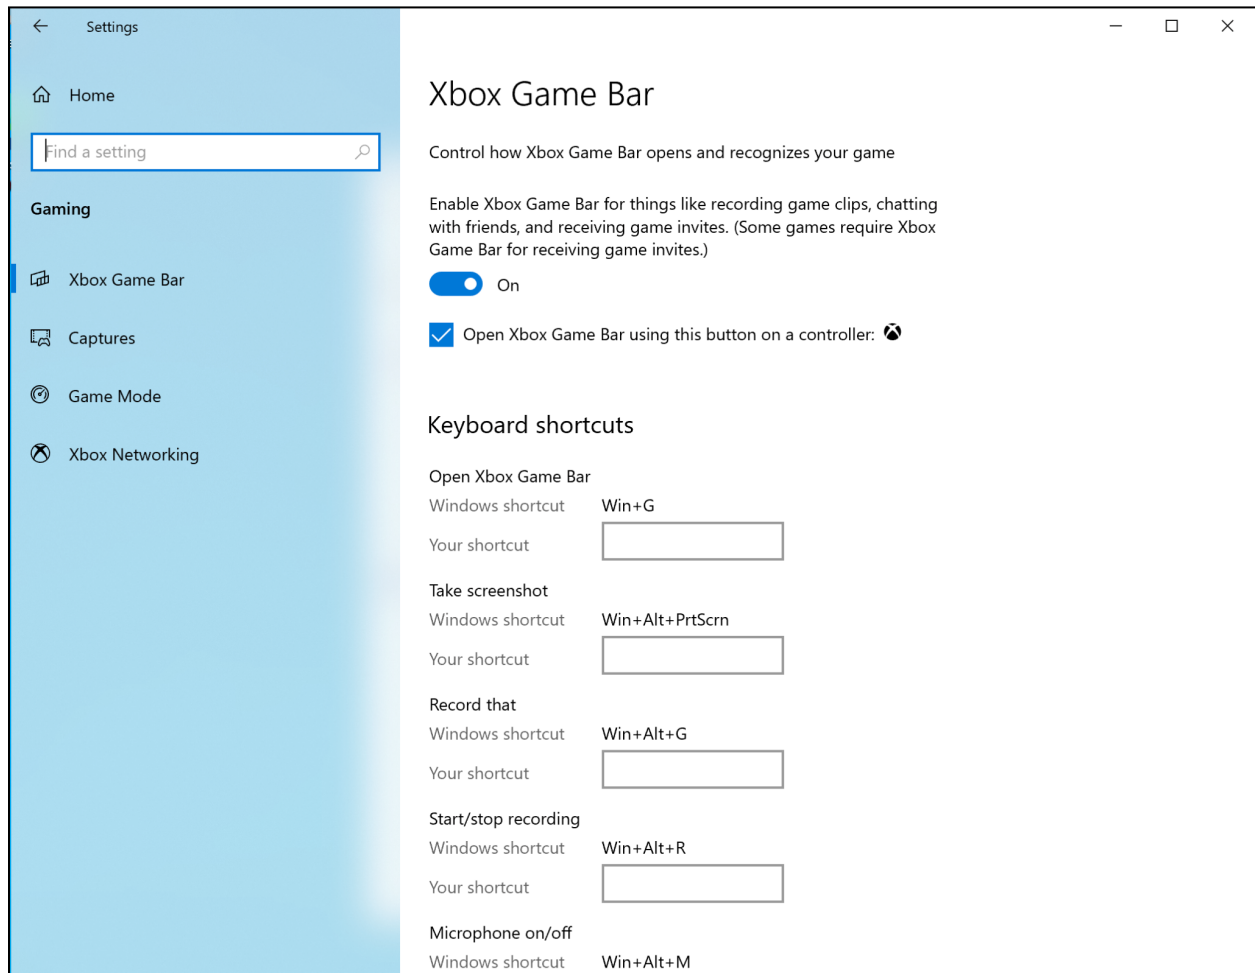

Network and Internet

Network and Internet lets the user check the status of internet connections, set airplane mode, search for a mobile hotspot, and check data usage. It also allows the user to set up a proxy server or let the computer up the proxy automatically. From this panel users can also set up and connect to Virtual Private Networks, VPNs.

Gaming

Gaming lets the user adjust game settings on the computer, including the Xbox Game Bar, broadcasting, and other game play modes. Users can also control Xbox Networking from this panel.

Accounts

Accounts lets users access their account info, such as user name and account privileges. On this panel, users can also add and manage email and app accounts associated with their Windows account. Users can set how they want to sign into their device. Users can add and manage accounts for work or school, and they can add and manage family and other user accounts. It also lets the user sync up their settings with other Windows devices.
